

# Council is planning to extend the footpath on Bridge Rd

Two options have been put forward (there is negligible difference in the cost).

## Design Concept 1:

- will retain the road width and provides active pedestrian protection (kerb and channel)
- extends from the bridge to Elfrida Ave only
- will require the removal of three healthy and mature gum trees

## Design Concept 2:

- will retain the gum trees
- footpath will extend to Honeysuckle Ave
- introduces a traffic calming device and has edge line delineation rather than kerb and channel.
